

Eliminate the guesswork

integrated mopping system  
**floor**  
**Logic**

Introducing Floor Logic, the next-generation mopping solution designed for thorough, zero-waste cleaning in resilient floor environments. This portable system combines a Wet & Dispense Delivery with on-board dilution control, minimizing cross-contamination risks. Its closed-loop design offers a safer, more efficient clean, meeting today's standards with ease and simplicity.

## How Floor Logic can improve your current system:

**Simplicity Exemplified** - Everything you need (mops, bucket, dilution control, dispensing) to quickly clean your floor in a **single-unit, easy to use, portable system**.

**Improved Cleaning** - The correct amount of fresh solution and microfiber with each and every application. **Never put your mop in dirty water again!**

**Cross-Contamination Mitigated** - Single-Use advanced microfiber mops are designed to clean the floor **without transferring any germs** from one location to another.

**Safety Enhanced** - Closed loop, lightweight design **eliminates chemical contact, spill risk, and back injuries**. Auto-Squeegee eliminates the need for hand wringing, and its associated injuries.

**Cost Controlled** - **Use only what is dispensed**. Eliminates the step of discarding cleaning solution ( and potentially unused mops ) at the end of the shift. Eliminate laundering costs. Keeps costs to pennies/room cleaning.

**Space, Storage, and Labor Savings** - Floor Logic's **compact & integrated design** frees up space on the cart and allows cleaning to truly happen on the go. No more return trips to the closet.

**Sustainability Advanced** - **Reusable bucket, Recyclable materials, and 40% less water used**. Single-Use disposal impact is balanced by eliminating laundering (water consumption, energy, chemicals, transportation)

Clean with Total Control
